Add labels to

INSTRUCTIONS Define the process you want to visualize, or use a pre-existing one 2 Develop the data flow by using the shapes and

Adjust and fine tune the data flow

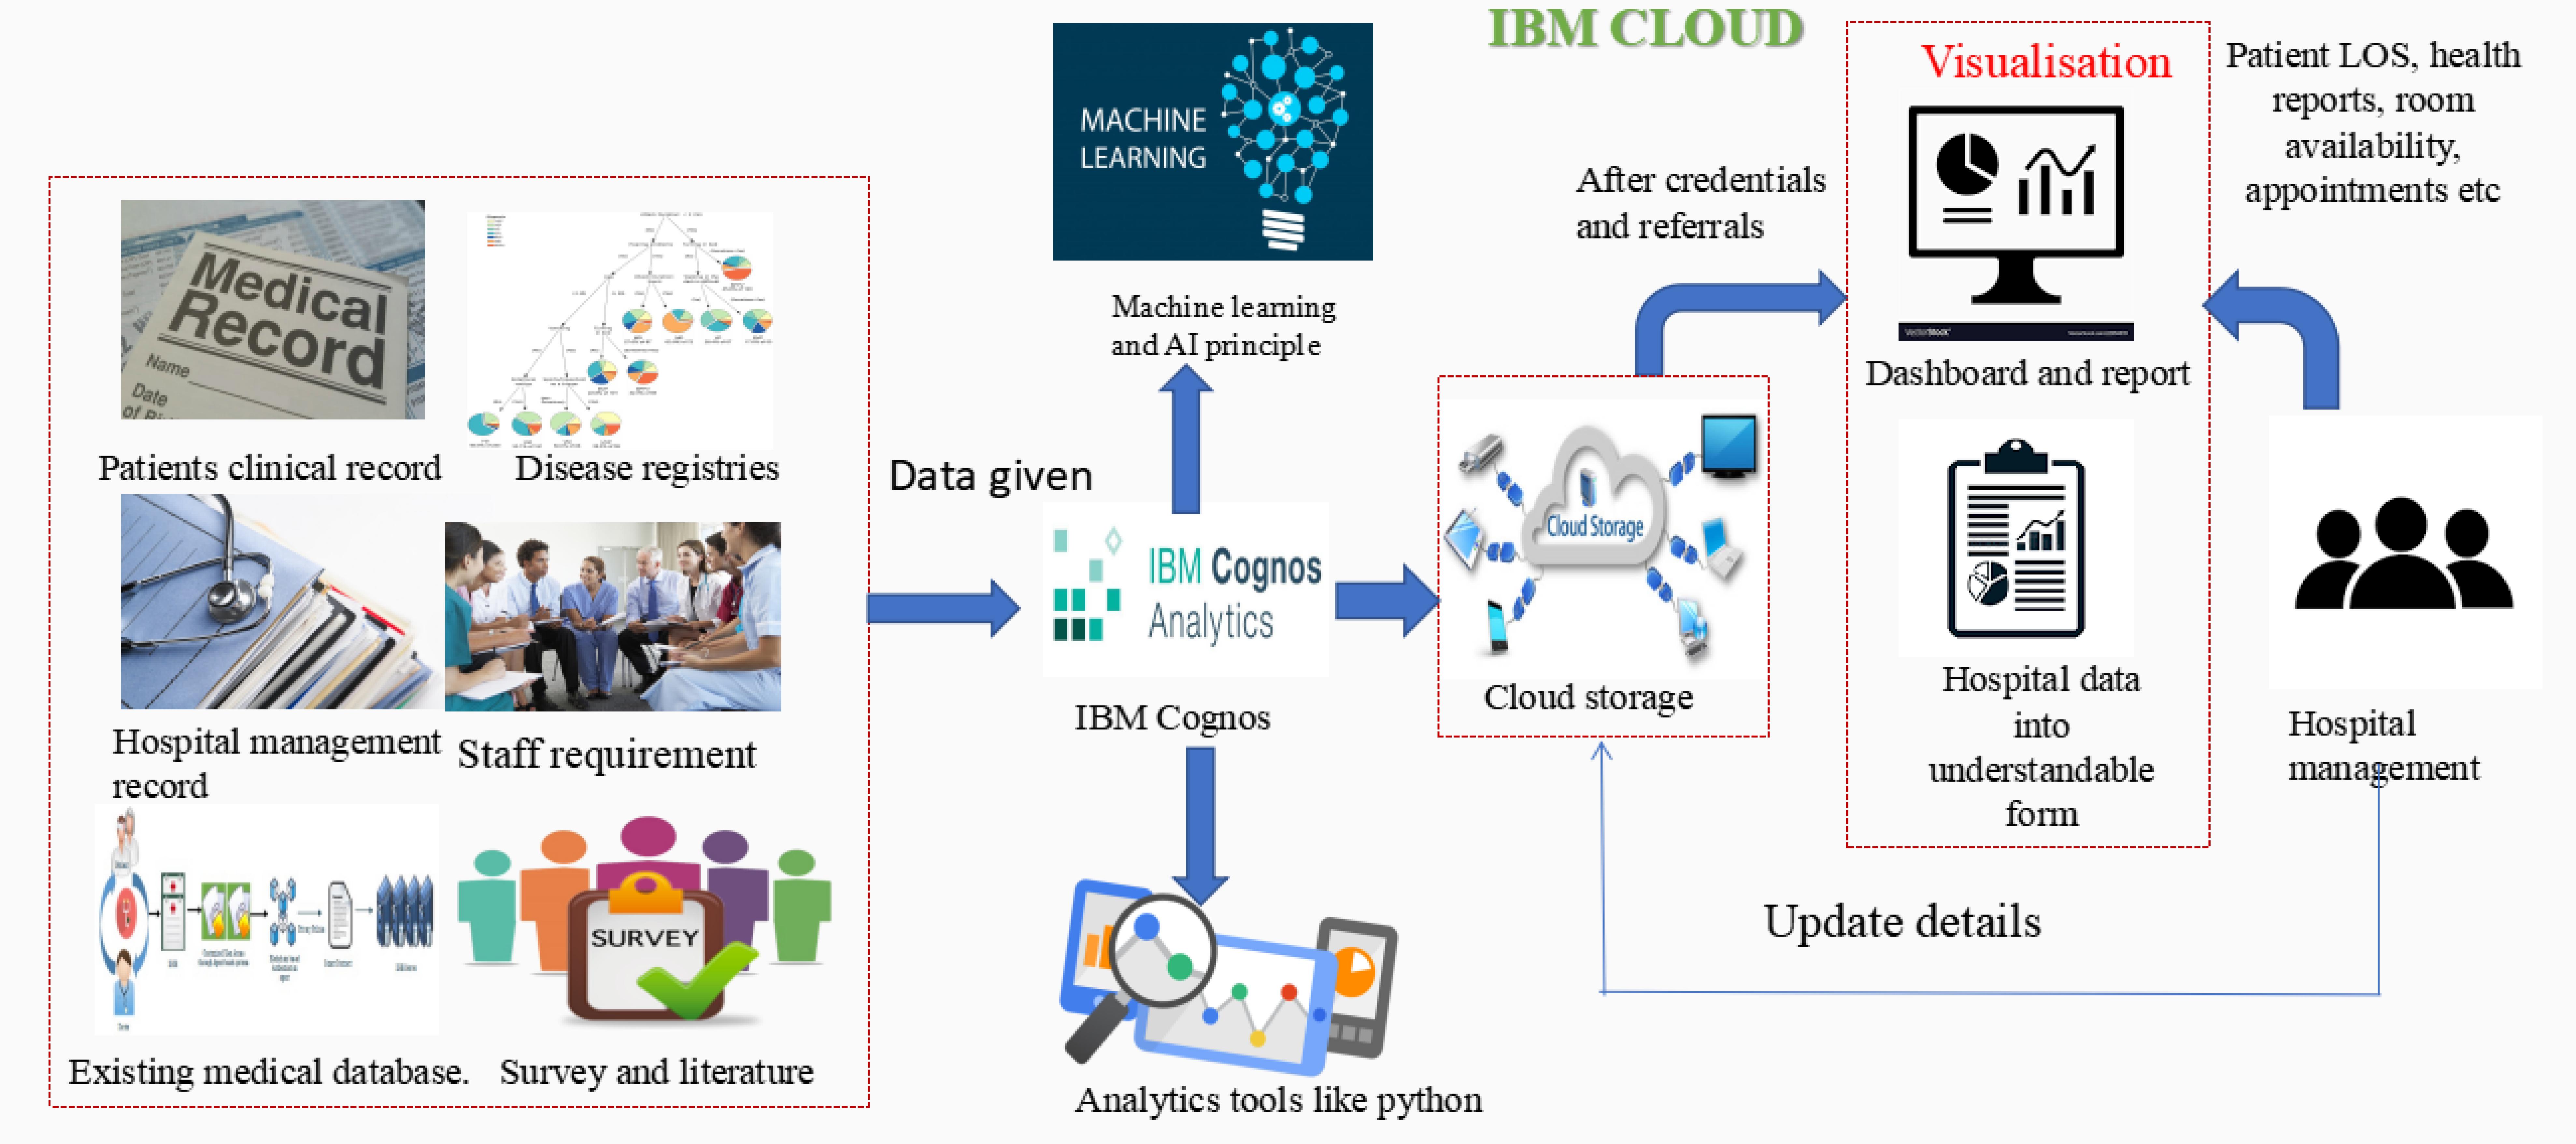

connectors in the key

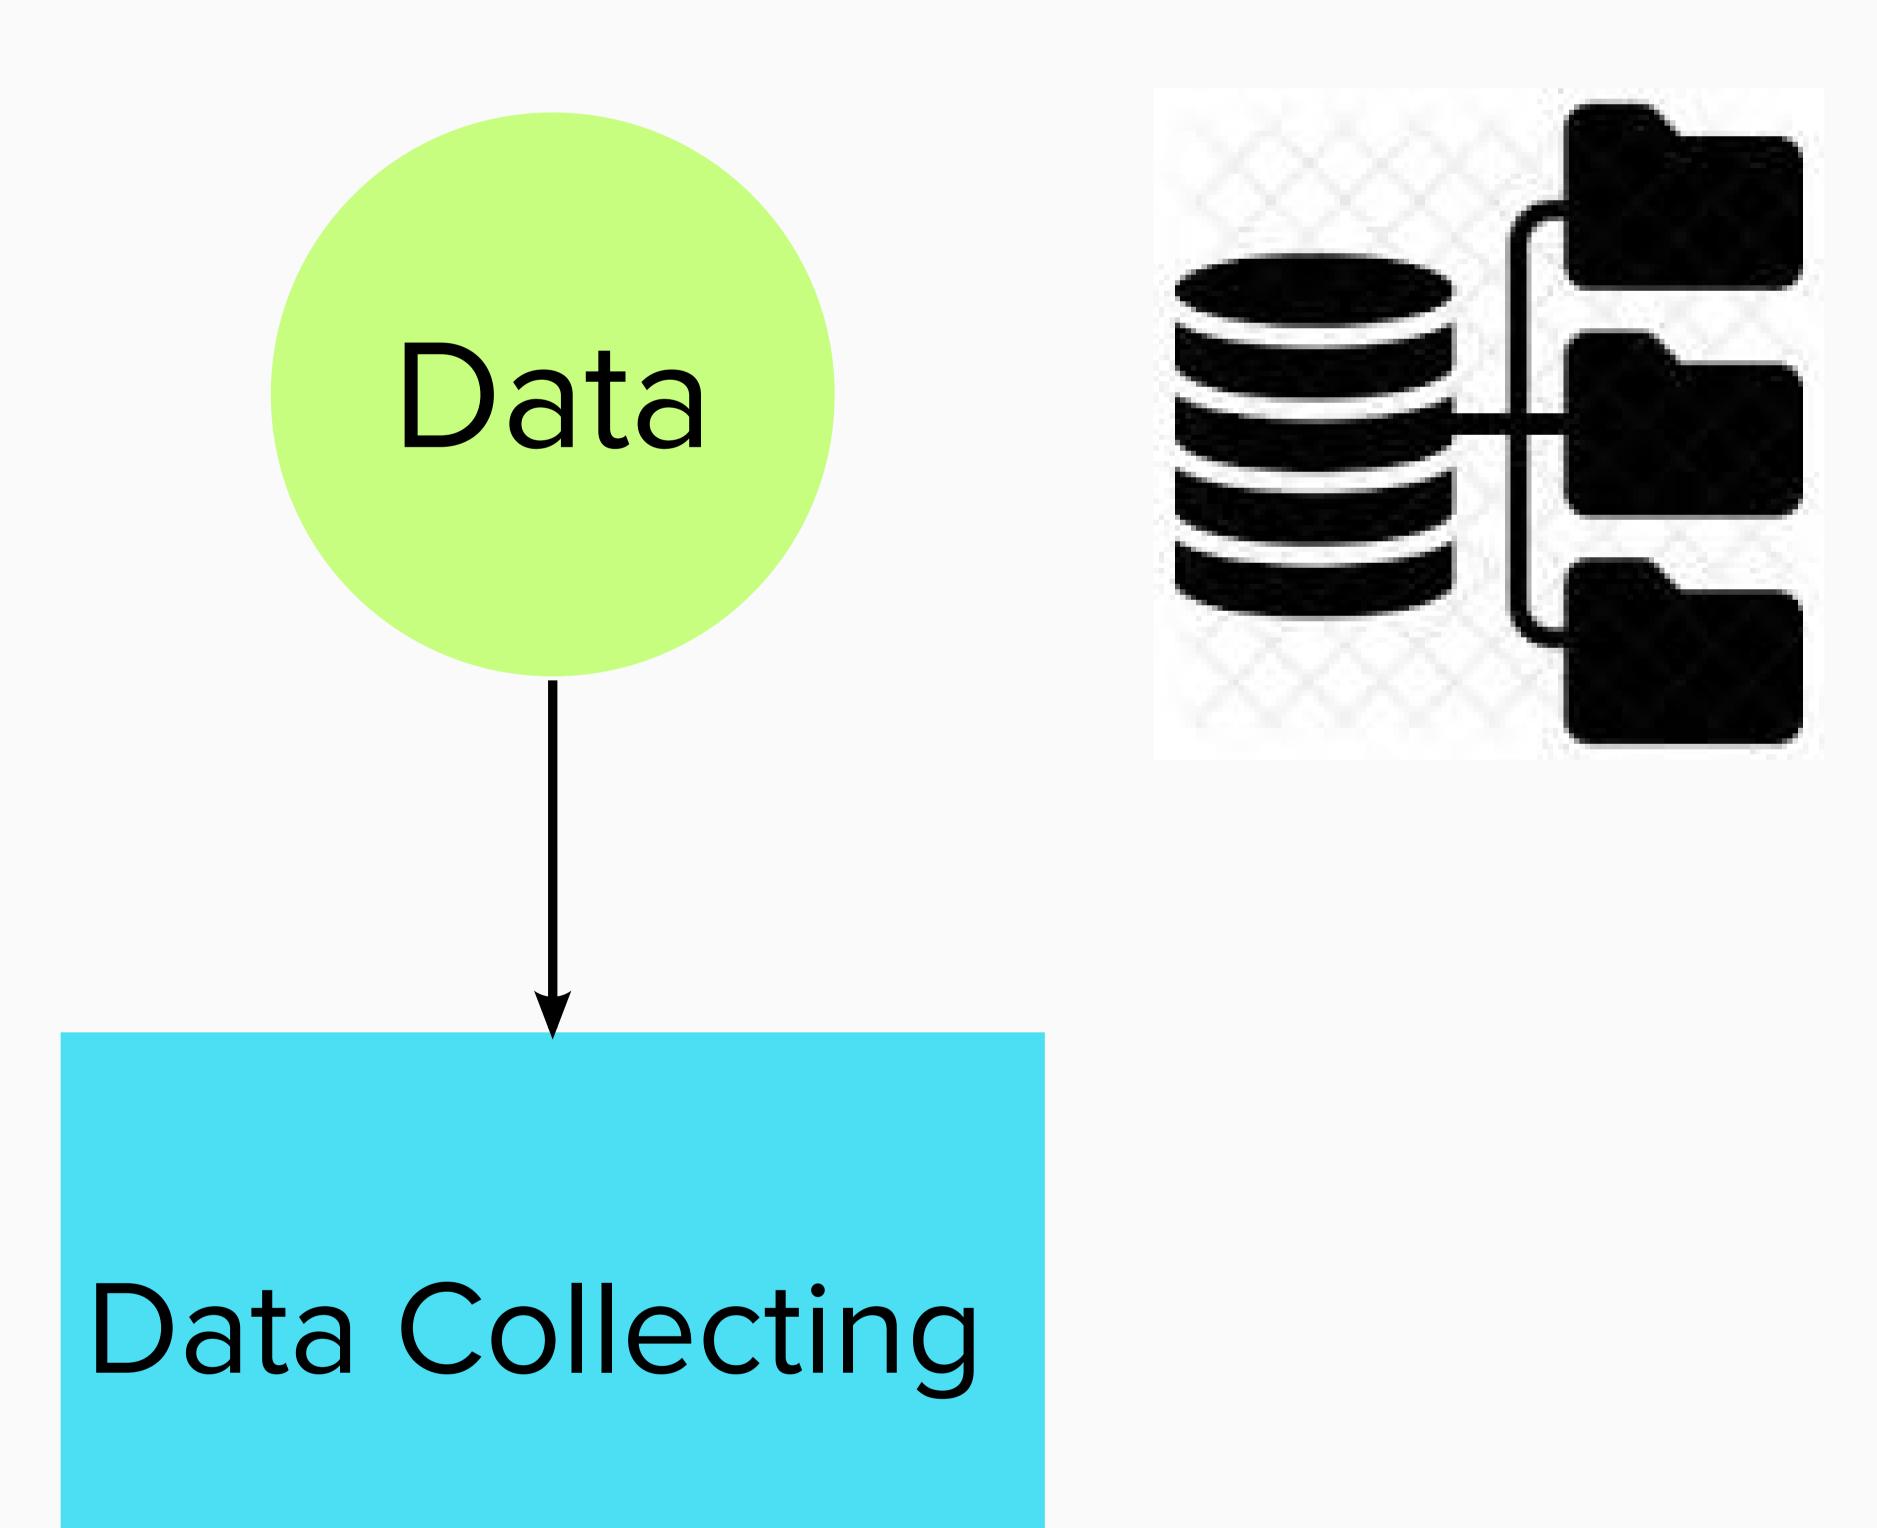

Review the data flow

5 Next Steps

## DATA FLOW DIAGRAM OF HOSPITAL HEALTH CARE DATA

**BRAINSTORMING AREA** 

Data is collected through various data sets.

NEXT STEPS

This collected data is integrated and preprocessed.

Selecting the features required which faccinate the nears

- After preprocessing the data it is formed into matrix which will be easy to extract.
- Extracting data the data is normalized which helps the user to understand the data.

FLOW KEY

This small rectangle is used for data that is required frequently or is produced in the process.

This shape is used for actions or instructions, the things that must be done.

It is where data comes from or goes to. It is external to the process.

Connects elements of the

flow.

VISUAL KEY

You can also make your diagrams more engaging by using images and icons!
